Vaccination Information:

Although the benefits of pet vaccination far outweigh the risks, certain effects, some potentially fatal, can be associated with vaccination. Some of these may appear right after your pet is vaccinated or they may occur within 48 hours. They are relatively rare, however. Following is a partial list of adverse reactions to be aware of: - low grade fever - soreness at injection site - sore joints - vaccine site lumps - vaccine site tumors (cats only) - iritis (inflammation of the eye) - anaphylaxis (acute allergic reaction); i.e., hives, facial swelling, vomiting, which can be potentially fatal if not treated.

Request and Consent for Vaccination:

I request to have my pet vaccinated. I have read and understand the materials provided to me. Any questions about vaccination have been answered to my satisfaction. I am aware of the potential benefits and risks of vaccinating my pet. I understand that serious complications after vaccination may occur and I will not hold CEI Spay Clinic liable for any fees or charges incurred as a result. I am aware that if I am not purchasing one of the packages above an office fee of \$15.00 is required.
